

DESIGN PROCESS

How We Work:- It is always best to make an appointment first, so that you can experience the products first hand in our showroom with a qualified designer. If this is not possible for any reason, we encourage you to visit our website to get a feel for the products.

Once you are convinced of the quality of our brands, our designers will, if you are able to supply plans, give you a rough estimate of the cost of the kitchen or furniture you have selected. This is done at no charge and will give you an idea on whether or not the products fall within your budget. If the products are reasonably close to budget you then have the option to move on to the full more accurate design process which includes site visits, realistic 3d renderings and technical drawings. A design fee is charged on kitchens and a further fee for other fixed home furniture. This is fully refundable if an order is placed. Our designers are sent for regular training to Germany and their time is precious as is the planning knowledge and technology. The design fee is necessary to ensure that serious clients get the best service, and our designers' time is not taken up by those wanting to abuse the service. Given that the brands are high end and the design and technology is cutting edge it is also important that this is kept exclusive.

The above covers general design, space planning, plumbing and electrical drawings etc. For clients wanting the added design service which will include design on soft furnishings or full home solutions there is an option to introduce in-house interior designers and decorators or International Interior Architects/Designers, depending on budget and scope of work. This can be discussed with one of our designers and a tailor made package can be designed for you.

We also offer our clients the option of visiting Germany and the Head Offices of all our brands to experience the full range of products (which is impossible to show in our studio). This gives them added assistance from Brand Designers and also allows them to see the production and quality of what they are purchasing first hand.

For purposes of installation clients have the option of a German trained local team or a Head Office team from Germany. Costs and Benefits can be discussed with your design consultant.
